

Pantera Mechanical Bottom Bailer

The Pantera Mechanical Bottom Bailer or PMBB® is a mechanical tool for well intervention with the sole purpose of dumping cement, bridging shots, chemicals, and other materials on top of a solid bottom. Can be conveyed by wireline or slickline as requires no voltage supply.

The PMBB gets activated by tagging a hard surface and displacing a bottom mechanism to immediately expose 4 ports that allows communication between the dump bailers content and the wellbore.

With no breakable parts nor debris from the activation, the tool can be reset on surface for a subsequent run without the need of redressing.

Specifications

Model	PMBB-A
Diameter	1 11/16"
Weight	4.4 Lbs.
Length	1 ft.
Material	SS316
Number of Ports	4
Total area of ports	5.8 in ²
Temperature Rating	350 °F
Pressure Rating	10000 Lbs.

Pantera Mechanical Bottom Bailer

Features

- Total ports area of 5.8in².
- Back to active position multiple times.
- Low maintenance cost.
- Non-Explosive.
- Suitable for Gravel dumping.
- SS316 material.
- Easy to use and maintain.

Application

- Dumping bridging material or cement.

Benefits

- Low-cost tool.
- Combinable with different sizes of bailers.
- Virtually reusable without redressing parts.
- Corrosion resistant.
